Engineering Life *with Care.*

At VIDHATA, our pursuit of engineering excellence is a reflection of our commitment to matters closest to our customers' growth—such as quality, precision, and operational trust.

While our toolroom and injection moulding technologies are truly **state-of-the-art**, our corporate execution model is **state-of-the-heart**.

Innovations, zero-defect quality standards, and end-to-end tooling options flow forth from our passion to serve medical, electronic, and industrial markets in a meaningful way.

Directory & Index

This index details the complete directory of engineering capabilities, manufacturing infrastructure, cleanroom medical lines, and quality verification systems available under one roof at Vidhata Plastics India Pvt. Ltd.

● Engineering & Tooling

Product Design & CAD	3
Design for Manufacturing (DFM)	3
Mold Flow Simulation	3
Injection Mould Tools	3
Extrusion Dies	3
Polyurethane Moulds	3

● Advanced Injection Moulding

High-Volume Injection Lines	4
Haitian Machine Capabilities	4
Blow Moulding systems	4
Polycarbonate Extrusion	4

● Cleanroom Manufacturing

ISO Class 8 Cleanrooms	5
Dialysis Parts & End Caps	5
IV Cannula plastic parts	5
Medical Tubing extrusion	5
Sterile assembly & gluing	5

● Assembly & Quality Control

Component Assembly Lines	6
Sterile Blister Packaging	6
Trimos Metrology Lab	7
Mitutoyo Inspection systems	7
Stability Chambers & Testing	7

Our Vision

To become a globally trusted manufacturing partner for medical, electronic, and industrial sectors.

Our Mission

Deliver world-class plastics engineering through innovation, quality, and customer-focused execution.

Precision Plastics at work...

Company Profile

Vidhata Plastics India Pvt. Ltd. was established to provide high-quality engineering plastic components at a very competitive cost. We match Chinese pricing structures while delivering superior quality and technical support.

Experienced Engineers

Our core asset is our highly trained design and manufacturing engineers. We apply continuous training in Six Sigma guidelines to eliminate molding defects, optimize cycle times, and maintain dimensional tolerances down to ± 5 microns.

Production Facilities

Our infrastructure includes over 400,000 sq ft of manufacturing area, with dedicated Class 100,000 and Class 10,000 cleanroom moulding zones. High-speed Haitian machines, CNC toolrooms, and automated material systems support our operations.

we Care as we Deliver...

Quality Assurance

Vidhata is committed to maintaining a strict Quality Management System (QMS) compliant with ISO 9001:2015 and ISO 13485 (Medical Quality Standard). We practice a PREVENTIVE APPROACH to manufacturing, enforcing raw material verification, moisture control, and inline parameter checks.

Continuous Improvement

Our dedicated engineers focus on continuous cycle-time reductions and process automation. We utilize mold flow simulations early in the design stage to eliminate parting lines, gate flaws, and mechanical weaknesses before building the hard tools.

PRECISION
PLASTICS

Q. M. S.

01. Engineering & Tool Manufacturing

Machinery & Cavity Core Fitting

Our high-precision tool room designs and builds molds for complex components. By matching CAD engineering with high-speed milling, we guarantee consistent tolerances for medical and industrial applications.

TOOL ROOM CORE CAPABILITIES

- **Product Optimization:** 3D modeling and DFM analysis to minimize raw material usage and cycle time.
- **Multi-Cavity Moulds:** Injection mould tools built for long lifecycles (over 1 Million shots).
- **Extrusion Tooling:** High-precision dies for medical and industrial tubing profiles.
- **Hard Tool Machining:** Hardened steel cavity blocks for long-term wear resistance.

01 DFM Analysis

02 CNC Milling

03 Wire Cut EDM

Haitian
Machines

02. Advanced Injection Moulding

High-Volume Automated Production

We operate state-of-the-art Haitian injection moulding machines ranging from 120T to 250T clamping force. Automated robot pick-and-place arms minimize manual intervention and ensure consistent cycle execution.

Clamping Force	Raw Materials	Product Applications
120T - 250T	PC, ABS, PP, POM, Nylons	Charger housings, LED diffusers
60T (Blow)	HDPE, LDPE, PP	Pharmaceutical containers, Flip caps
Extrusion	PC, PVC, PU	LED batten housings, medical tubing

PROCESS CONTROL FEATURES

- **Dryer Systems:** Dehumidifier material drying prevents mechanical failures caused by internal moisture.
- **Material Handling:** Automated color dosing and vacuum conveying lines prevent contamination.
- **Post-Processing:** Heated annealing ovens stabilize internal stress in polycarbonate (PC) parts.

03. Cleanroom Medical Devices

ISO Class 8 sterile manufacturing

Our dedicated cleanroom moulding and assembly facilities support medical, pharmaceutical, and IVD components. We utilize medical-grade resins and maintain biological barrier protocols.

CLEANROOM CAPABILITIES

- **Biocompatible Materials:** ISO 13485 compliant processing of USP Class VI raw materials.
- **Dialysis Components:** Dialysis housing end caps, blood ports, and hollow-fiber casings.
- **IV Cannula parts:** Needle hubs, flashback chambers, luer adapters, and closures.
- **Closed Drainage:** Medical tubing, catheter mounts, and urine collection components.

Metrology Inspection & Success Stories

Quality assurance at Vidhata Plastics India Pvt. Ltd. is supported by a state-of-the-art metrology laboratory and inline quality control protocols at every stage of production.

Metrology Lab Assets

Trimos Height Gauges	Active
Mitutoyo Profile Projector	Active
Melt Flow Indexer (MFI)	Active
Moisture Analyzer Systems	Active
Environmental Stability Chambers	Active

Production Success Cases

Philips, Eveready LED Parts	30M+ Annually
Reliance Jio Charger Cases	12M+ Units
ECIL EVM Moulds	24 Tools Built
Adidas, Ecco PU Soles	3M+ Pairs
